

# Principal BioStatistician

BioStata is a Contract Research Organization (CRO) who specializes in Data Management and Statistics.

BioStata offer all Biometrics services required in relation to clinical and device trials, including Data Management.

We are data managers, statistical/SAS programmers and statisticians, and our office is located in Birkerød.

Our new colleague should have one or more of the following areas of competencies:

- Power calculations/Sample size.
- Statistical models.
- PK calculations.
- Integrated summaries.

In addition to the above mentioned:

- Fluent in oral and written English.
- Able to work structured, independently and with a flexible mindset.
- Act as Biometric project manager on behalf of BioStata.

You will – on some projects - be our face towards our customers ensuring that both external and internal expectations are met. You will be involved – as a part of a professional trial team – in a great variety of projects, tasks and customers, where the work is mainly carried out at our office, but sometimes at the customer site or a mix of both.

You will be working together with our statisticians, data managers and programmers in trial teams, where we all benefit from our experienced staff.

We hope to hear from you.
